SUMMARY

Software Engineer with 1.5+ year at TCS building Java and Python automation tools, including a Java automation for a simulation procedure that saved 720 hours annually, and a Python framework built from scratch using reusable OOP design. Strong in Data Structures & Algorithms (600+ LeetCode problems, 1540 rating), OOP, DBMS and Operating Systems. Also experienced in machine learning and computer vision projects. Seeking SDE roles.

- **Languages:** Java, Python, C++, C, JavaScript, SQL
- **Web:** HTML5, CSS3
- **Databases:** MySQL
- **ML / Computer Vision:** OpenCV, MediaPipe, scikit-learn, Pandas, NumPy
- **Tools:** Git, GitHub, VS Code
- **Core CS:** Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, DBMS

WORK EXPERIENCE

Software Engineer | Tata Consultancy Services (TCS) | Jan 2025 - Present

Java: STAR-CCM+ Automation

- Automated a standard STAR-CCM+ simulation procedure in Java, reducing manual effort by **50%** and saving **720 hours** annually by replacing repetitive manual steps with a repeatable, code-driven workflow.
- Enhanced existing Java classes and built new ones to support the procedure, extending the tool's capabilities while preserving existing functionality and keeping the changes easy to maintain.
- Reused and integrated previously built in-house classes into the new implementation, reducing duplicated code and keeping the solution consistent with the structure of the existing codebase.
- Converted the manual procedure into ordered, repeatable steps in code, removing repetitive manual intervention and making the procedure faster and more consistent to execute.

Python: Automation Framework

- Built a Python automation framework from scratch using object-oriented design, creating a clean foundation to automate multiple engineering procedures.
- Created common base classes shared across all procedures, plus procedure-specific classes for individual requirements, minimizing duplicated logic and keeping each procedure's code focused and organized.
- Designed and implemented step-by-step automation logic for **3** end-to-end procedures, turning manual workflows into configurable, repeatable code that follows a consistent structure across procedures.
- Structured the framework so new procedures can be added with minimal changes to existing code, improving extensibility, maintainability and the speed of future development.

PROJECTS

Hand Gesture Mouse Control System | Python, OpenCV, MediaPipe, PyAutoGUI

- Built a real-time hand gesture recognition system using MediaPipe and OpenCV that translates hand movements into mouse actions such as cursor movement, clicks and scrolling through PyAutoGUI.
- Improved computer accessibility by reducing dependence on physical input devices like a mouse or touchpad, enabling cursor control through simple hand movements captured by a camera.

Bank Loan Classification and Creditworthiness Prediction | Python, Machine Learning

- Built predictive models to classify loan applicants by creditworthiness and default risk.
- Applied data science techniques to support faster loan approval decisions and reduce default risk

EDUCATION

B.Tech in [Your Branch] | Gayatri Vidya Parishad College of Engineering, Visakhapatnam | 2020 - 2024 | CGPA: 8.3/10

ACHIEVEMENTS

- Solved **600+** Data Structures & Algorithms problems on LeetCode with a contest rating of **1540**
- Earned multiple LeetCode badges, including the **500 Days Badge** for consistent daily practice
- Runner-up in the college chess competition
